

## Top 10 Tips...

### For Bird Control

- 1 Nuisance birds** can cause damage to buildings and offices, and pose a serious health risk to employees and the public. If you're responsible for employee or public safety and ignore bird problems, or deal with bird control in the wrong way, you could be prosecuted.
- 2 Netting:** One of the most successful and cost effective methods of proofing buildings is physically sealing off problem areas to deny access to birds. Netting is often used to protect individual building features, eaves, or to cover entire roofs or frontage elevations.
- 3 Spiking:** The simplest and least expensive way of deterring birds from alighting on specific areas like ledges, parapets, beams, signage, gutters and roof edges.
- 4 Limit available food and water:** This will discourage birds from nesting or roosting in or around your premises.
- 5 Electric Bird Deterrent Track:** Discreet and only 6mm high. Deters birds with an uncomfortable, but harmless electrical pulse. Used on surfaces such as ledges, parapets, beams and signage.
- 6 Flying Birds of Prey:** A natural deterrent - regular flying of birds of prey discourages birds from roosting, nesting and egg laying. Useful for flock dispersion on large open sites when combined with other preventative methods.

- 7 Egg Oiling and Replacement:** Prevents eggs from hatching and therefore restricts flock breeding numbers. Effective as part of a bird control program, but should only be undertaken by a trained bird control professional.
- 8 Visual Scare Products:** These can work well in combination with electronic sound repellents, but often require a little while to take effect. Includes kites, decoys etc.
- 9 Bird Droppings and Guano Clearing:** A clear disease risk and slip hazard which requires a professional approach. Clear, clean and treat your walkways and contact surfaces with biocide to remove contamination risks.
- 10 Call a Professional:** We can recommend the most appropriate bird control methods to use to safeguard your business, people and property. You may be liable if you allow any bird control work to take place at your building which does not comply with legislation and licencing.
