

## Top 10 Tips...

### For Fly Control

- 1 Flies:** There are four common species of fly that may invade your property or business: House Fly, Blue Bottle, Cluster Fly and Fruit Fly.
- 2 Maggots:** These are flies in their larval form and could indicate a potential breeding site in your property.
- 3 Carriers of Disease:** Flies spread disease, contaminate foodstuffs and some species even bite or sting.
- 4 Cleaning & Hygiene:** Food debris and liquid spillages should be cleared immediately, along with prompt disposal of all refuse.
- 5 Solutions for Food Premises:** Windows can be fitted with fly screens and there are ultra-violet electric fly killers suitable for food premises.
- 6 Dustbins:** All bins containing food waste or packaging should be sited away from windows and doors, have tight-fitting lids and be sprayed or dusted inside and beneath with insecticide in warm weather.
- 7 Food Preparation:** Flies spread disease by landing on food before we eat it. Make sure you keep meat and other food covered whilst preparing meals.
- 8 Remove Dead Flies:** Not only are they unsightly, but they could attract other pests.
- 9 Treatment:** Our professional fly control service will eliminate flies in your property and identify and remove any potential breeding environments.
- 10 Call a Professional:** Any significant fly infestation should be tackled by a pest control professional. Monitor will implement an Integrated Pest Management (IPM) approach, which will eliminate infestations quickly and efficiently.
